Activities and Interests

Occasional pastimes include gaming, reading, badminton and skiing but my keenest hobbies usually have a social aspect an example of this is my gaming. My interest in gaming is not what it was when I was younger however I do really enjoy group and cooperative gaming.

The biggest impact this social interest has had on my hobbies is the push towards my membership and voluntary roles I have with local communities.

I spend a couple of evenings a week at Hack Oldham, a community makerspace, attending members nights and helping with events. Two events I help with is Codeup and Digital Drop in.

Codeup is a session for anyone interested in coding, or learning to code, to turn up and work on projects or get help with issues. Most of my time spent here is tinkering or learning something with a personal project but from time to time I have mentored people looking to learn to code.

Digital Drop In is a session for members of the public to come and sit down with one of our volunteers and get help with a digital problem they are having. Most of the issues usually involve new devices and people who are less computer literate, but on occasion we have a curve ball.

I also help at a local charity amateur dramatic society based at playhouse 2. Again, the appeal is mostly social, and I usually help in non-technical positions but have on occasion given advice on technical topics.

Experience
